Verana Quality Measures Dashboard EHI Export

Introduction

EHI means “electronic protected health information” (ePHI) as defined in [45 CFR 160.103](#) to the extent that it would be included in a designated record set as defined in [45 CFR 164.501](#), regardless of whether the group of records are used or maintained by or for a covered entity. EHR (electronic health record) systems provide means for exporting PHI (protected health information) that allows healthcare clinicians to share information while maintaining the privacy and security of patient data.

Verana Health offers access to the Verana Quality Measures Dashboard and files to allow users the ability to access export documentation to process EHI after it has been exported by the Verana Quality Measures product. Practices that participate in the American Academy of Ophthalmology IRIS[®] Registry (Intelligent Research in Sight) or the American Academy of Neurology’s Axon Registry[®] and have completed their EHR integration via Verana Health are eligible to receive the quality dashboard.

Users with specific permission that can be granted upon request can use the export option available via the **Download** button on the Verana Quality Measures Dashboard to export EHI for one or more patients.

Export File

An export file may contain one patient or a full collection of patients. The result will be a CSV file that displays the following information:

Position	Column Name	Type	Description
1	Patient ID	int	Sequentially generated identifier unique to the given table
2	Patient GUID	int	Universally unique identifier that is unique across all tables
3	Version	int	Indicates version of given patient's information
4	Source	int	Indicates the source of the given patient's information
5	Date of Birth	string	Patient's date of birth "yyyy-mm-dd"
6	MRN	string	Medical Record Number associated with the patient
7	Sex	string	Sex of the patient
8	Last Name	string	Patient's Last Name
9	First Name	string	Patients First Name
