Verana Health®

DATASHEET
Oncology Qdata®

Delivering quality insights through quality real-world data to enhance evidence generation and accelerate clinical trials.

Verana Health ® powers oncology research with high-quality real-world data sourced from curated electronic health records and linked data sources at leading cancer centers across the US. Built specifically for cancer research, Verana Health's oncology datasets and analytics deliver clinically rich insights across tumor types and lines of therapy, supporting evidence generation at every stage of the drug development and commercialization lifecycle.

Powered by Oncology-Specific Research-Grade Data

Verana Health curates fit-for-purpose oncology real-world data for cancer research. Verana Health's datasets are derived from unstructured, de-identified clinician notes from electronic health records, which are abstracted, clinically validated, and transformed into high-fidelity variables. The result is longitudinal, disease-specific oncology data that enables insights not possible from claims-only or registry-based sources.

2.5M+
Cancer Patient lives across solid and liquid tumors

Verana data included
3
FDA/EMA Approvals

50/50
Academic vs. Community Treatment Setting

2X
Higher Inclusion Percentage in ECA vs. Competitor

Clinician-led and AI-enabled oncology data platform

Verana Health securely ingests, links, and curates raw oncology care data from point-of-care clinical encounters. Purpose-built, fit-for-purpose data is designed to support rigorous research and confident decision-making across the oncology lifecycle.

Ingest Data
Structured and unstructured oncology EHR data are captured and de-identified, preserving clinical nuance from real-world care delivery.

Link Data
Data are harmonized and tokenized across EHR systems and linked with complementary sources, including claims data, biomarker and genomic data, and other relevant clinical inputs.

Curate Data
Data are clinically abstracted, quality-controlled, and continuously curated using expert oncology oversight and technology.

Curated, High-Quality Oncology Data
Available across multiple tumor types and treatment settings, including:

Hematologic cancers:
- Acute Lymphoblastic Leukemia
- Acute Myeloid Leukemia
- Chronic Lymphocytic Leukemia
- Diffuse Large B Cell Lymphoma
- Follicular Lymphoma
- Marginal Zone Lymphoma
- Multiple Myeloma
- Myelodysplastic Syndrome
- Small Lymphocytic Lymphoma
- Mantle Cell Lymphoma

Solid tumor cancers:
- Breast Cancer
- Colon Cancer
- Rectal Cancer
- Gastric Cancer
- Lung Cancer
- Melanoma
- Ovarian Cancer
- Pancreatic Cancer
- Prostate Cancer

Verana Health®

DATASHEET
Oncology
Qdata®

Real-World Data Research Steward Across Drug Lifecycle

Clinical Development

-Study Design and Feasibility
-Natural History and Patient Journey Analysis

Pre-Approval

-Disease Landscape and Epidemiology
-Unmet Need and Treatment Patterns
-Clinical Pathways and Outcomes Benchmarking

Peri-Approval

-Health Economics and Outcomes Research (HEOR)
-Evidence Generation to Support Regulatory Review

Commercial

-Forecasting and Market Sizing
-Treatment Adoption and Utilization Patterns

Post-Approval

-Comparative Effectiveness Research
-Regulatory Commitments and Evidence Support

Market Expansion

-New Indications and Label Expansion
-Line-of-Therapy and Population Analysis
-Real-World Drug Utilization and Outcomes

ALL QDATA DATASETS INCLUDE

- Robust EHR data with true data provenance, via direct access to EMR
- Comprehensive patient journey even at standard data model, including complex elements such as response & progression outcomes, molecular markers, and treatment discontinuation reasons
- Ability to augment with omics data such as DNAseq and RNAseq
- Alibility to link with data sources such as closed claims to support HCRU studies, or imaging to hone in on response details

About Verana Health

Verana Health, Inc.® is a digital health company revolutionizing patient care and clinical research by utilizing physician expertise and artificial intelligence to unlock the true potential of real-world data. With exclusive access to the world's largest patient data sources in oncology, ophthalmology, neurology, and urology. Verana Health is powering real-world evidence generation. Clinicians utilize these insights to improve the quality of care and quality of life for patients, and life sciences companies rely on the insights to accelerate the development of new therapies. For more information, visit www.veranahealth.com.
